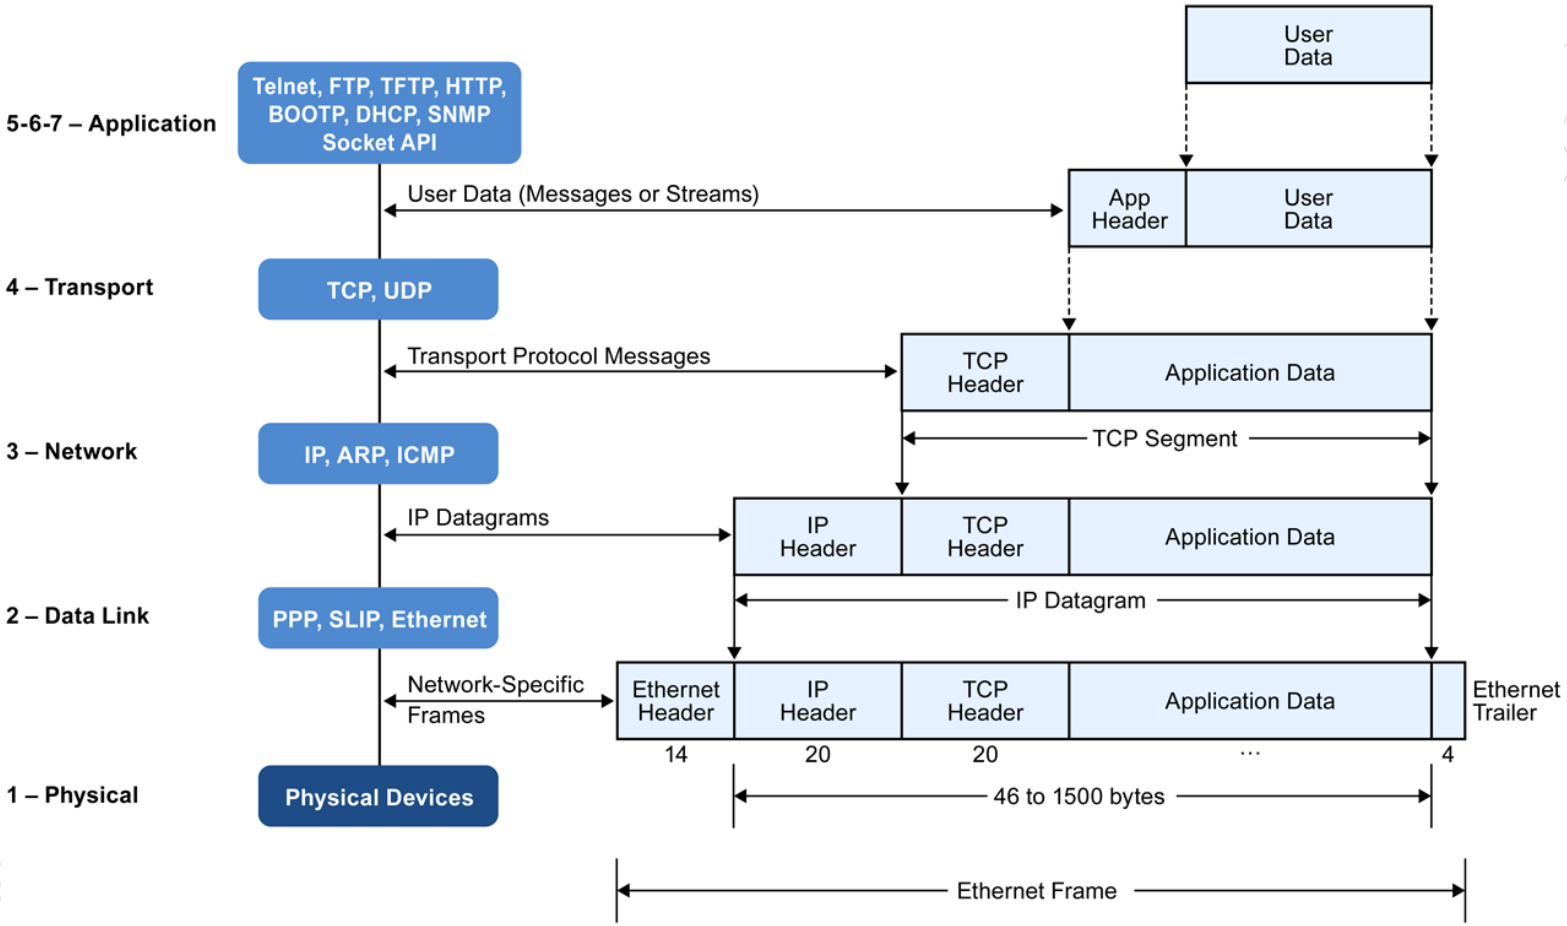
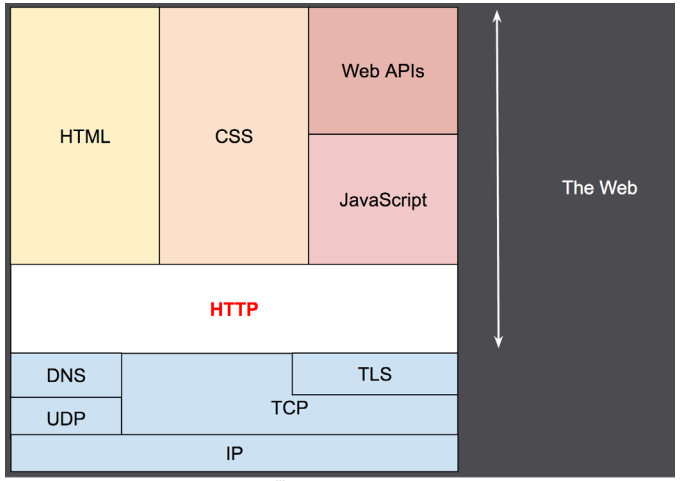
Protocolli

Modello ISO/OSI

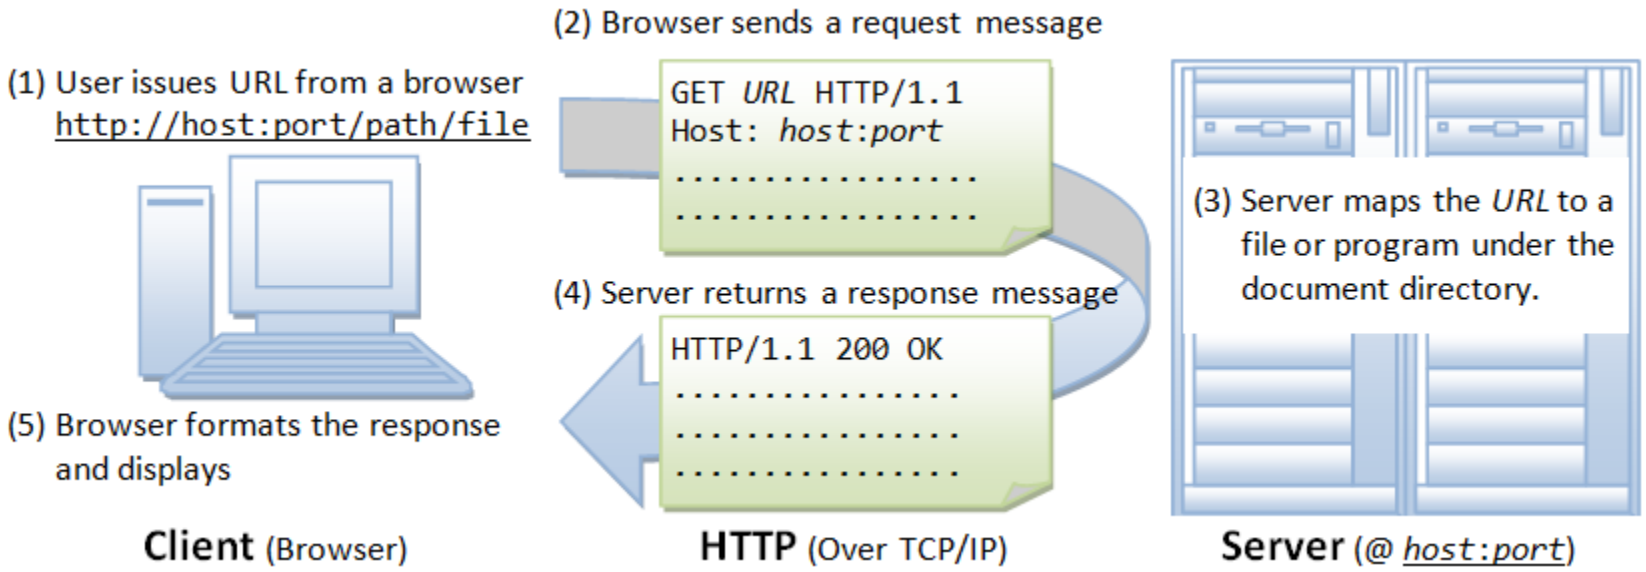


HyperText Transfer Protocol (HTTP - rfc2616)

- Protocollo a livello applicativo
- A livello di trasporto si basa sul TCP (o TLS)
- Request/Response (Client / Server)
- Url composta da http://host:port/path/file
- Metodo: GET/POST/PUT/DELETE/OPTIONS..
- Stato nella risposta: 200/300/400/404/500
- Header di request e di response
- Gestione cookie
- Diversi content-type (html/text/image/json/xml)

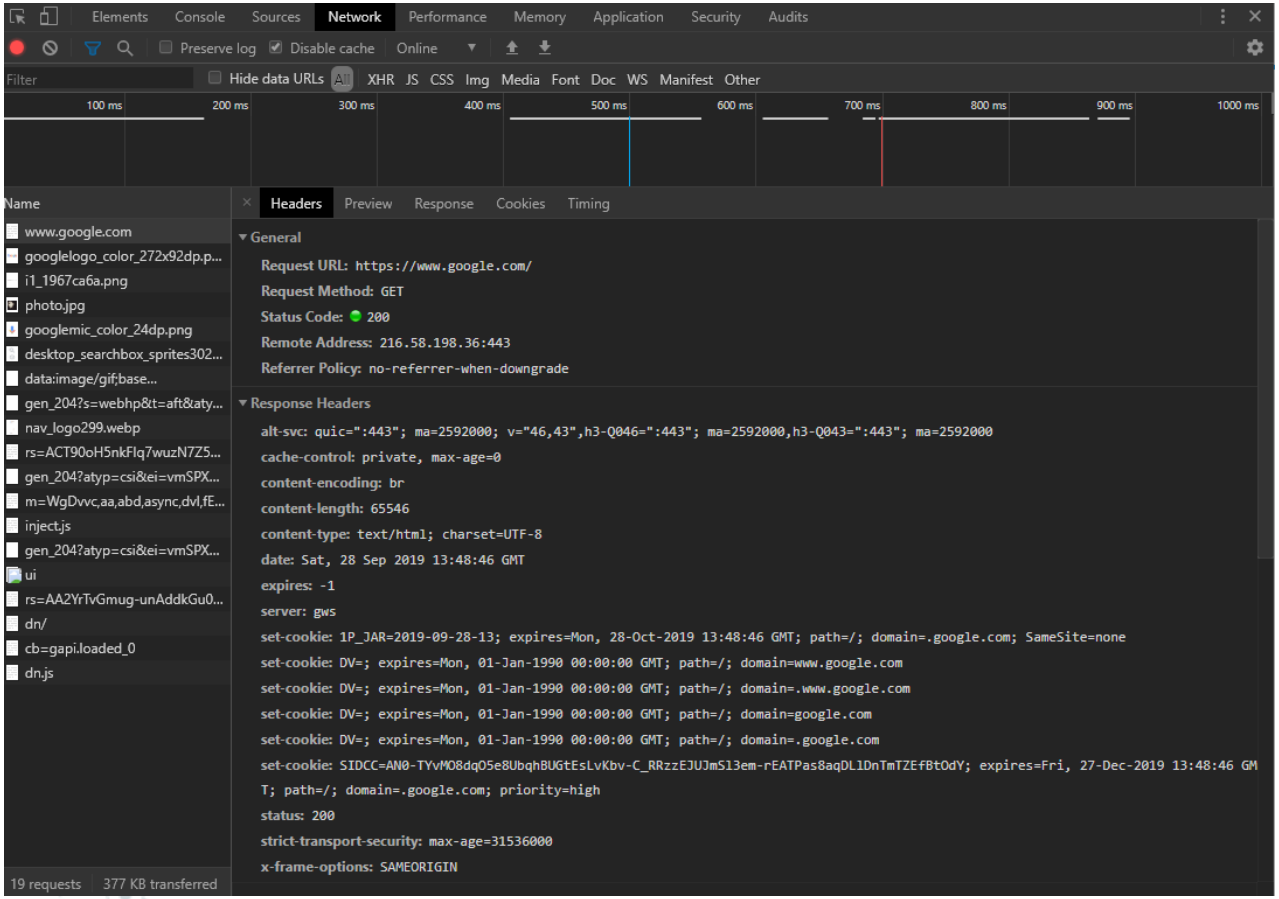


HyperText Transfer Protocol

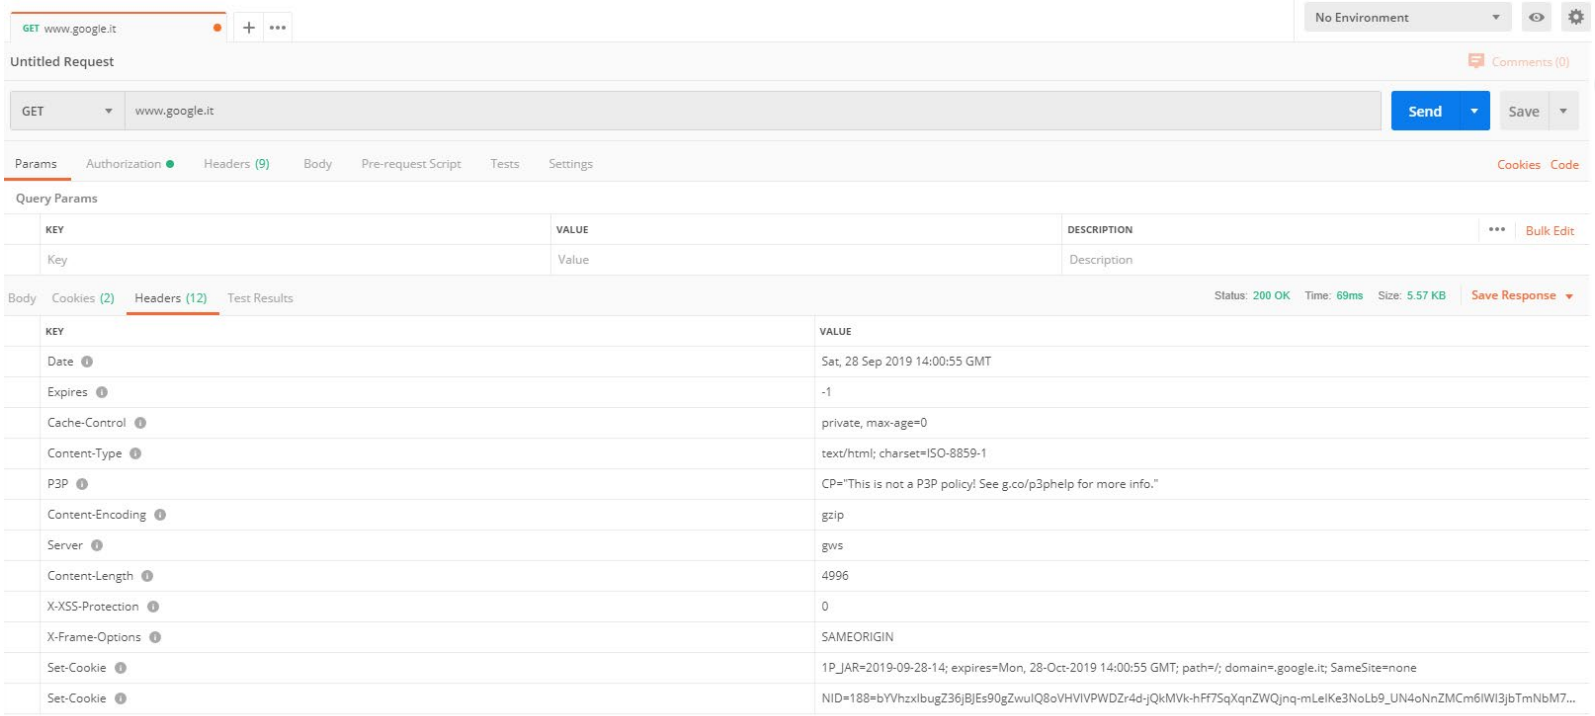


HyperText Transfer Protocol

Studiare:
Headers – Metodi - Cookie – Status Code - Timing



HyperText Transfer Protocol



HyperText Transfer Protocol

Limiti del protocollo:

- Una connessione per request/response
- Mancanza di gestione delle priorità su connessioni multiple
- Bassa compressione (no header compression)

Browsers:

Version	Maximum connections
Internet Explorer® 7.0	2
Internet Explorer 8.0 and 9.0	6
Internet Explorer 10.0	8
Internet Explorer 11.0	13
Firefox®	6
Chrome™	6
Safari®	6
Opera®	6
iOS®	6
Android™	6

Es: Apache Web Server Settings

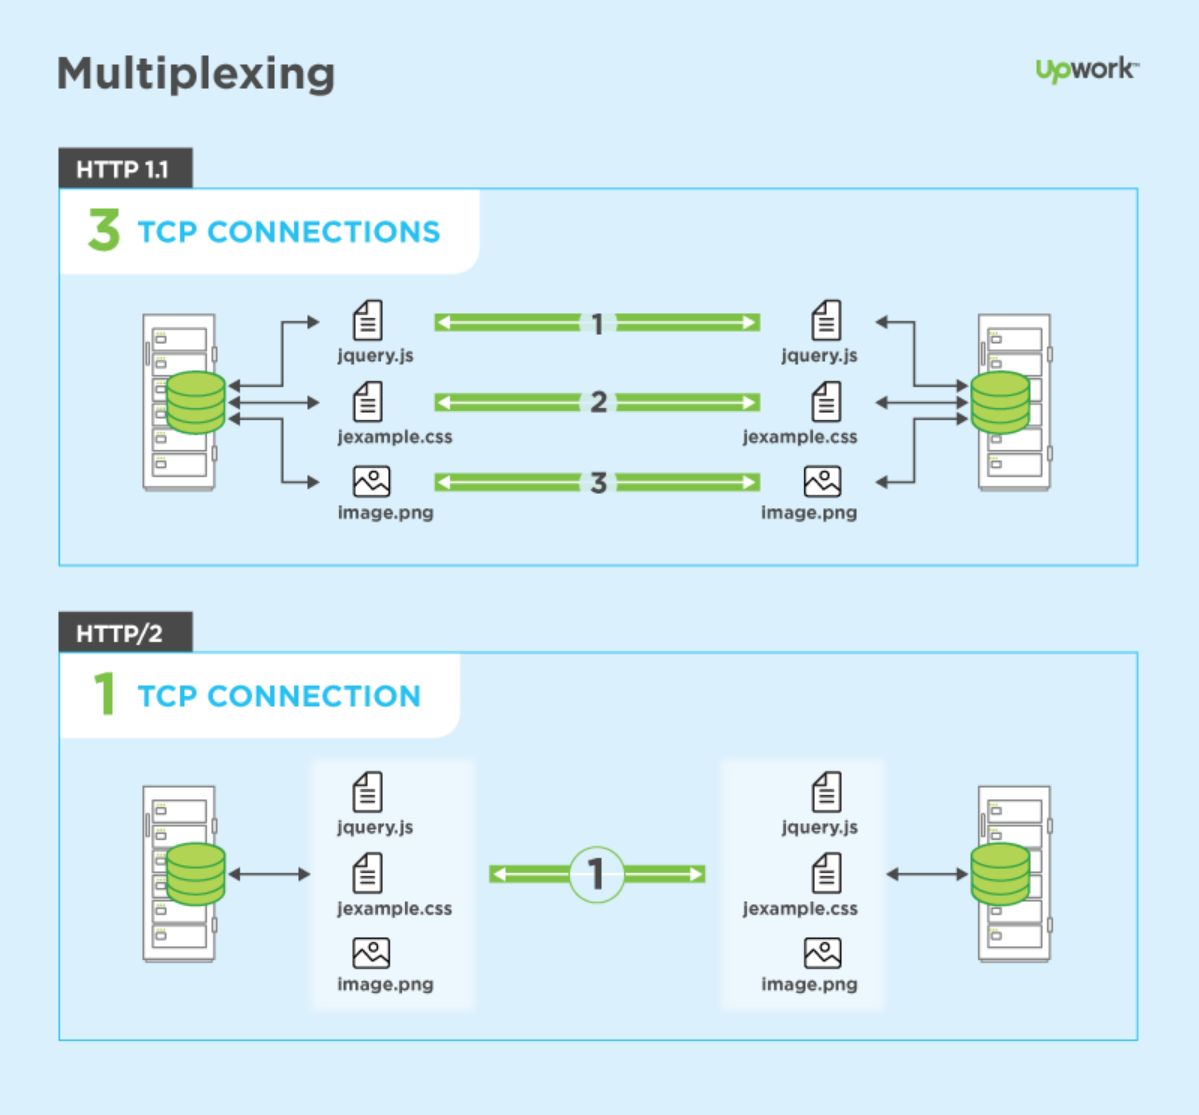
Concurrent Connections

By default apache2 is configured to support 150 concurrent connections. This forces all parallel requests beyond that limit to wait. Especially if, for example, active sync clients maintain a permanent connection for push events to arrive.

This is an example configuration to provide 8000 concurrent connections.

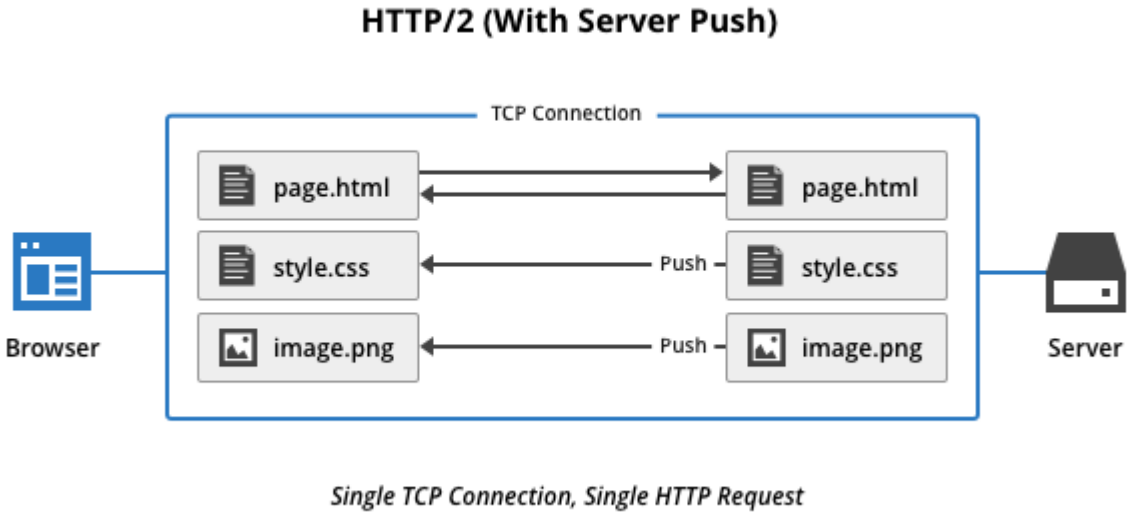
```
<IfModule mpm_worker_module>
    ServerLimit              250
    StartServers              10
    MinSpareThreads           75
    MaxSpareThreads          250
    ThreadLimit               64
    ThreadsPerChild           32
    MaxRequestWorkers       8000
    MaxConnectionsPerChild 10000
</IfModule>
```

HTTP2 - rfc7540

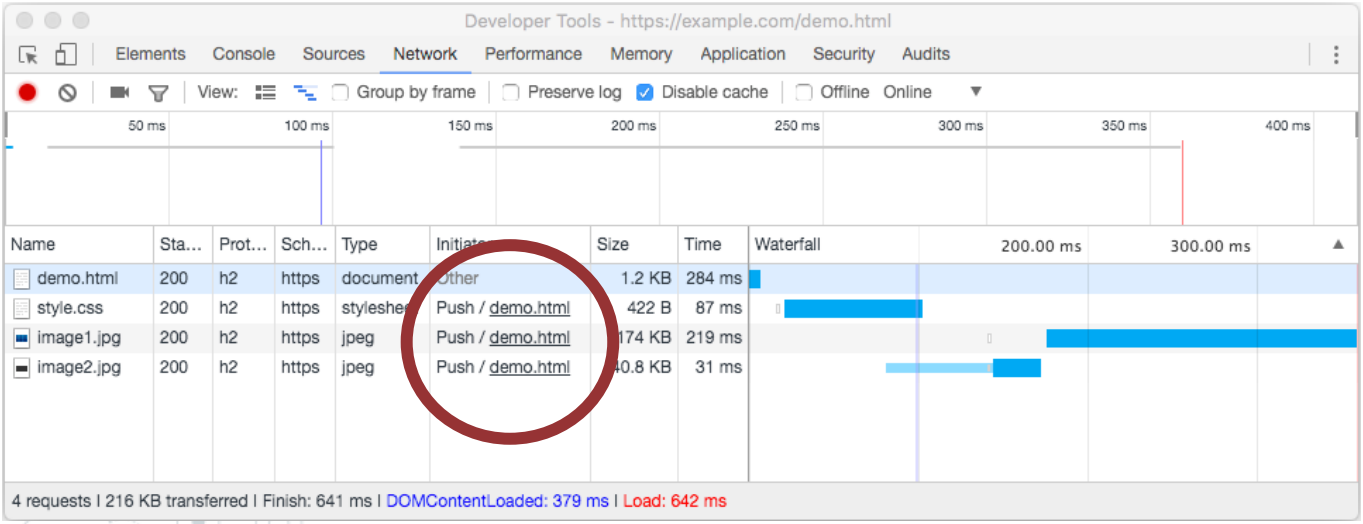


http://www.http2demo.io/

HTTP2

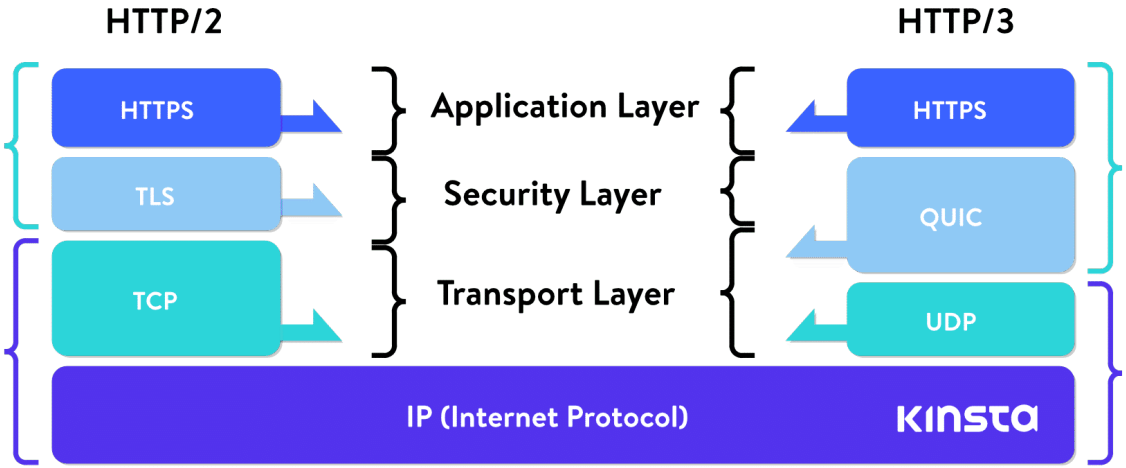


Single TCP Connection, Single HTTP Request

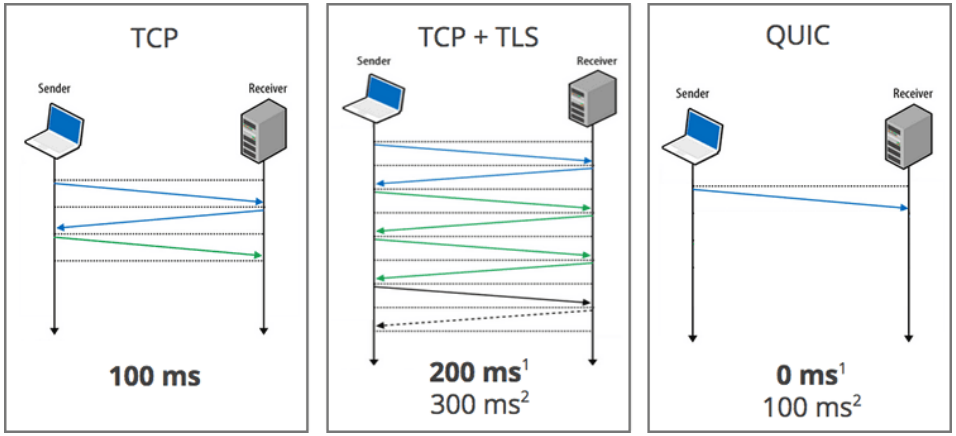


https://http2.akamai.com/demo/http2-lab.html

HTTP3



HTTP/3 è la terza versione dell'Hypertext Transfer Protocol (HTTP), già noto come HTTP-over-QUIC. QUIC (Quick UDP Internet Connections) è stato inizialmente sviluppato da Google ed è il successore di HTTP/2. Aziende come Google e Facebook stanno già utilizzando QUIC per velocizzare il web.

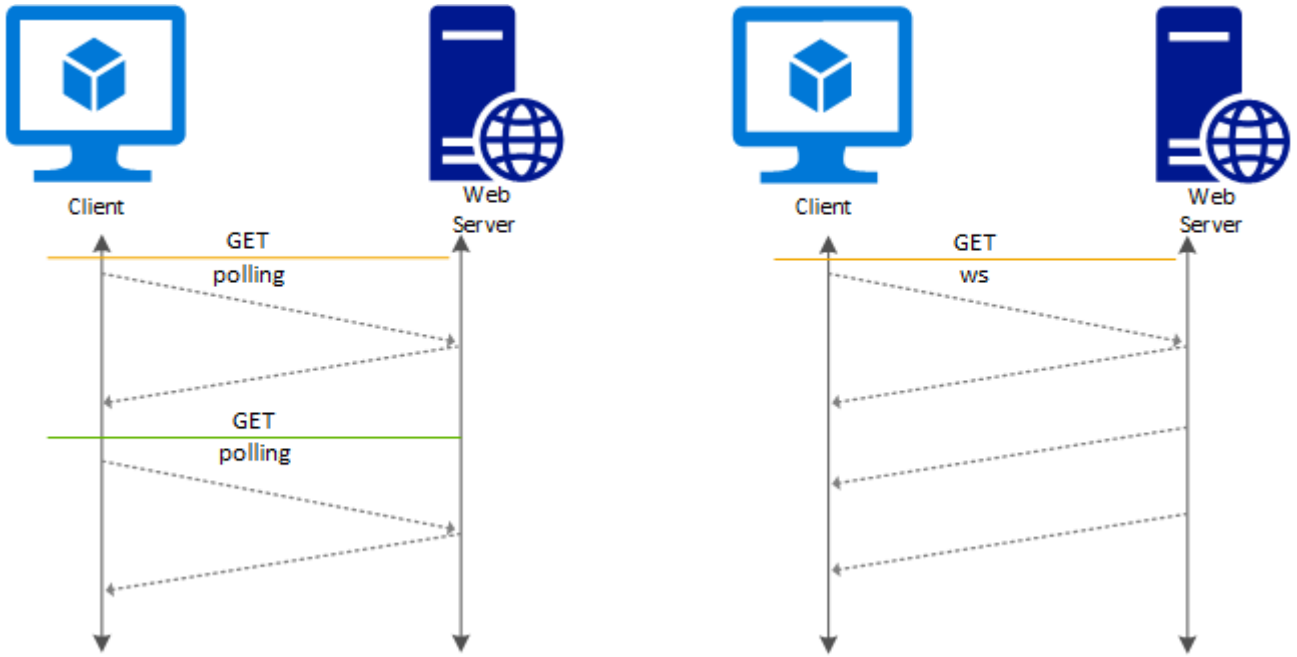


https://kinsta.com/it/blog/http3/
https://www.evemilano.com/protocolli-http/

WebSocket - rfc6455

Limiti del protocollo:

- Primo handshake su http
- Se tutto fa vene il protocollo della connessione passa da http a websocket (usando la connessione Tcp precedentemente aperta dalla prima connessione http)
- A questo punto rimane solo il protocollo websocket
- Scambio messaggi bidirezionale



https://www.websocket.org/echo.html

OT: Come gestire le password

Sicurezza

No matter how secure you think you might be, something malicious can always happen. Because, **"*With the right tools and Talent, a Computer is an open book.*"**

Joanna Rutkowska

Sicurezza

Sono riuscito a violare un Sistema. Cosa faccio?

1. Apertura file wp-config.php (wordpress) o configuration.php (jooml)
2. Individuazione delle informazioni in chiaro della connessiona al mysql
3. Esecuzione di uno script per il dump del DB
4. Download del dump in locale

Password in chiaro:

id	username	password	passwordHint
1	admin	l337	k3wl dud
2	pumpkin22	halloween	my favorite holiday
3	johndoe	queen	Freddie Mercury's band
4	alexa45	password	password
5	guy	123456	*NULL*
6	maryjane	queen	I'm one!
7	dudson123	halloween	scary movie!

Sicurezza

MD5 : funzione di hash non reversibile

Password = MD5(PasswordInseritaDallUtente);

Password crittografate:

id	username	password	passwordHint
1	admin	7E7274BAC45E467C5AB832170F12E418	k3wl dud
2	pumpkin22	5377DBF76D995CC213ED76924A31CB13	my favorite holiday
3	johndoe	512239D9AE0C3B5567DE188739F689F2	Freddie Mercury's band
4	alexa45	2FE5421E49061F8225C2FB7CB81980FD	password
5	guy	ABE35E2827DDA834C9612FE9E9C92CE0	*NULL*
6	maryjane	198670893B2781C83F3DA5D45150123D	I'm one!
7	dudson123	59E2113217E65B9885F9DA73FDC5697B	scary movie!

Potrei avere un db ti migliaia di hash generati da password conosciuti e scoprire le password.

Sicurezza

Secret: Bdy~])/S%@QgSHYH^MdO3&>c9q*2#i

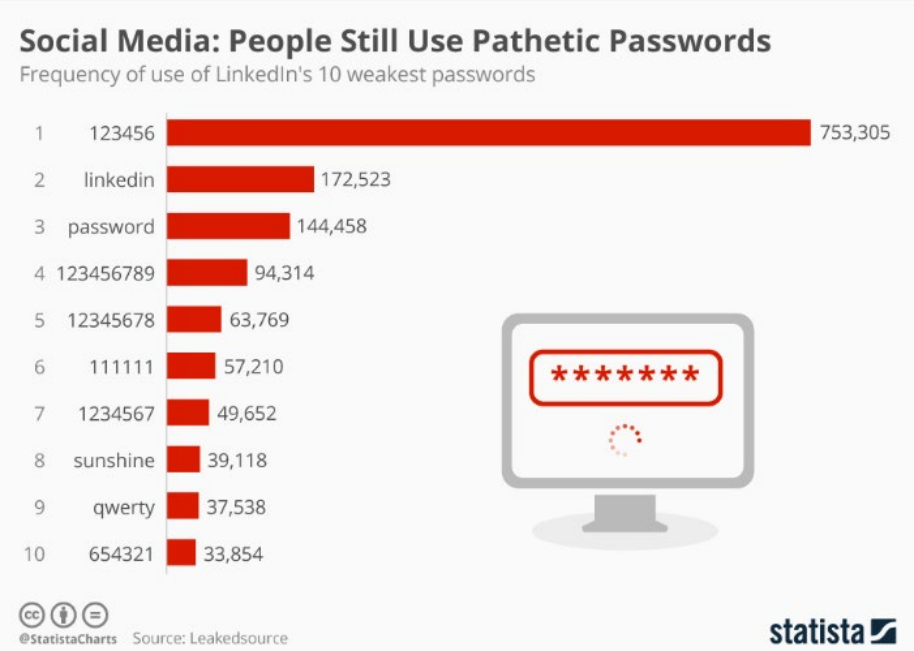
Password = MD5(PasswordInseritaDallUtente + **Secret**);

Password crittografate:

id	username	password	passwordHint
1	admin	7E7274BAC45E467C5AB832170F12E418	k3wl dud
2	pumpkin22	5377DBF76D995CC213ED76924A31CB13	my favorite holiday
3	johndoe	512239D9AE0C3B5567DE188739F689F2	Freddie Mercury's band
4	alexa45	2FE5421E49061F8225C2FB7CB81980FD	password
5	guy	ABE35E2827DDA834C9612FE9E9C92CE0	*NULL*
6	maryjane	198670893B2781C83F3DA5D45150123D	I'm one!
7	dudson123	59E2113217E65B9885F9DA73FDC5697B	scary movie!

Non posso più utilizzare tabelle di password conosciute perché la Secret è differente dalla mia.
Dovrei rigenerarmi tutta la mia tabella di password conosciute con la Secret.

Sicurezza



Individuo nei file php la Secret usata da wordpress/joomla.
Utilizzare un dizionario di password più utilizzate per essere più veloce e generare una lista di password da confrontare con quella del db

Sicurezza

Secret: Bdy~])/S%@QgSHYH^MdO3&>c9q*2#i

Salt: differente per ogni utente

Password = MD5(PasswordInseritaDallUtente + **Secret + Salt**);

```
SELECT Username, PasswordHash, Salt FROM dbo.[User]
```

Results | Messages

E’ efficiente

MD5 for passwords

93

Using salted md5 for passwords is a bad idea. Not because of MD5's cryptographic weaknesses, but because it's fast. This means that an attacker can try billions of candidate passwords per second on a single GPU.

What you should use are deliberately slow hash constructions, such as scrypt, bcrypt and PBKDF2. Simple salted SHA-2 is not good enough because, like most general purpose hashes, it's fast. Check out How to securely hash passwords? for details on what you should use.

Scoprite se siete stati **pwned**

A corruption of the word "Owned." This originated in an online game called **Warcraft**, where a map designer misspelled "owned." When the computer beat a player, it was supposed to say, **so-and-so** "has been owned."

Instead, it said, so-and-so "has been pwned."
