

Software Project Management - Laboratory

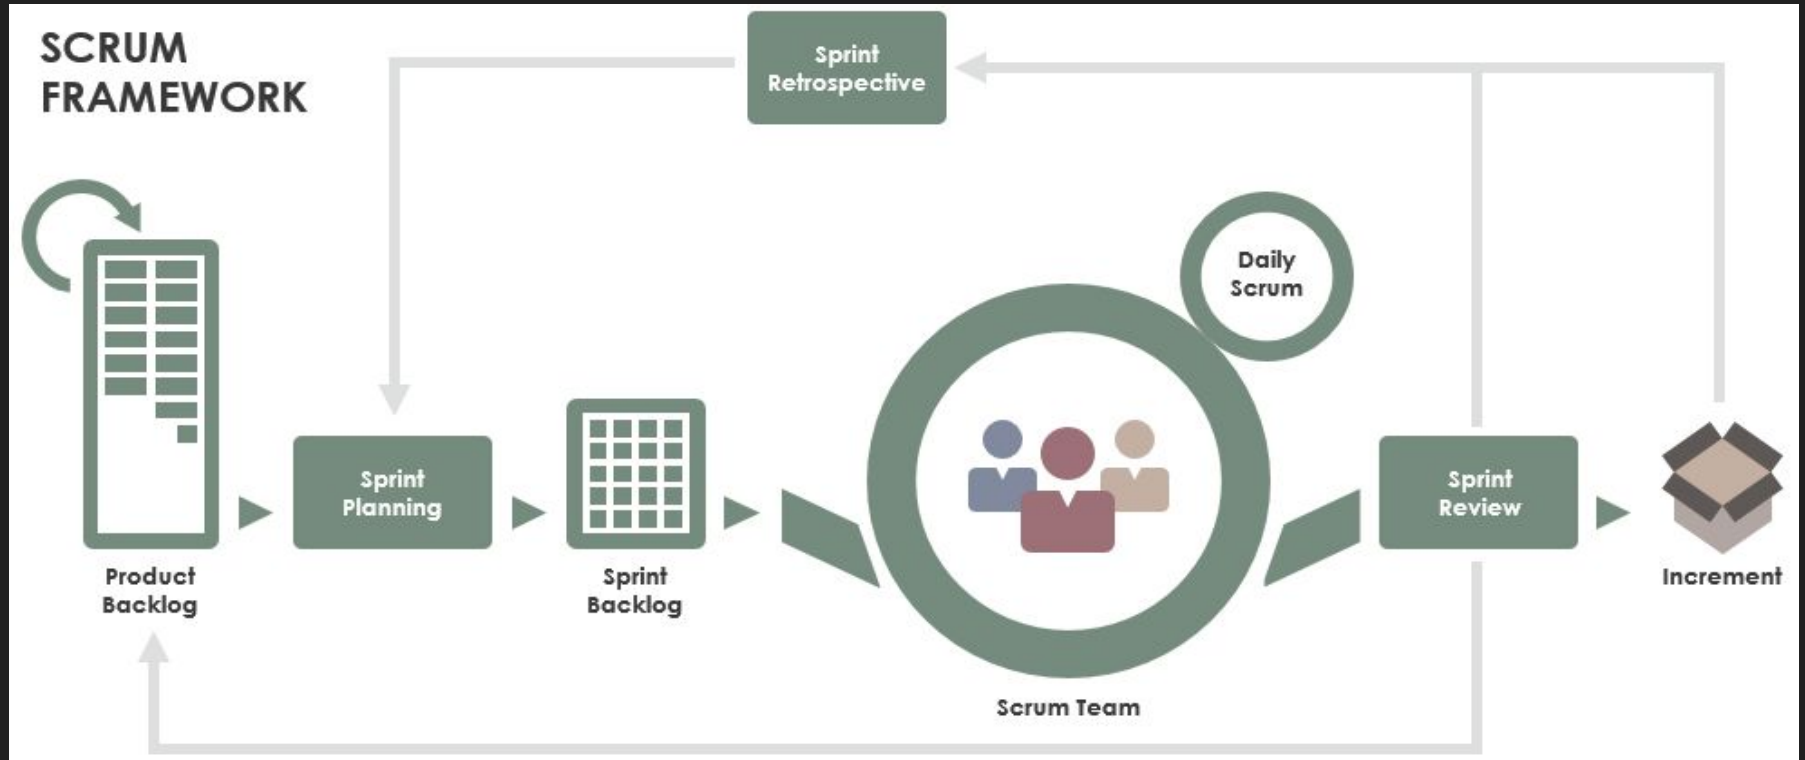

Lecture n° 4
A.Y. 2021-2022

SCRUM - Recap

Scrum is an Agile framework for project management that emphasizes teamwork, accountability and iterative progress toward a well-defined goal.

SCRUM

Roles

Customer - who requires the development of some software to address specific needs

Product Owner - is responsible for working with the user group to determine what features will be in the product release. Some of the responsibilities:

- Develop the direction and strategy for the products and services, including the short and long-time goals;
- Provide or have access to knowledge about the product or the service;
- Understand and explain customer needs for the Development team;

Scrum Master - is the facilitator for an agile development team. Some of the responsibilities:

- Act as a coach, helping the team to follow scrum values and practices;
- Help to remove impediments and protect the team from external interferences;
- Promote a good cooperation between the team and stakeholders;

Scrum Team - is formed by **3 to 9** people who **MUST** fulfill all technical needs to deliver the product or the service. They will be guided directly by the Scrum Master, but they will not be directly managed. They must be self-organized, versatile, and responsible enough to complete all required tasks.

Sprints

Every 2 Weeks on Friday a Sprint finishes and a new one Starts.

Ideal group size: 3

October 29th	Friday	Sprint 1

First Sprint: Planning (Defining User Stories)

Artifacts

The SCRUM artifacts are used to help define the workload coming into the team and currently being worked upon by the team.

The main artifacts:

- **Product backlog** - a collection of user stories which present functionalities required/wanted by the product team. Usually the product owner takes responsibility for this list.
- **Sprint backlog** - a collection of stories which could be included in the current sprint.

User Stories

A User Story is a simple and quick description of a specific way that the user will use the software. Generally between one and four sentences long.

Can generally follow a template:

*As a <type of user>,
I want to <specific action I'm taking>
so that <what I want to happen as a result>.*

e.g. “As a customer, I want to be able to create an account so that I can see the purchases I made in the last year to help me budget for next year.”

Assign a value to estimate the effort needed to elaborate a user story (e.g., 1 to 5).

Project User Stories

As a Registered User

I want to login

so that I can access to my personal information

As a Logged User

I want to define an IoT device

So that I can store information about the device.

Learning User Stories

As a Team member

I want to search for an IoT simulator

so that I can abstract from the physical world for the initial phases of the project

As a Team member

I want to study React

so that we can use it for the front-end

As a driver
I want to login into the system
so that I can use it

- I want to login using facebook credentials
- I want to login using gmail credentials
- I want to login using unicom credentials

Milestones as Sprint Backlog

The screenshot displays the GitHub interface for managing milestones. At the top, navigation tabs include Code, Issues (3), Pull requests, Actions, Projects (1), Security, Insights, and Settings. Below this, there are tabs for Labels and Milestones, with a 'New milestone' button on the right. A summary bar shows '1 Open' and '0 Closed' milestones, with a 'Sort' dropdown on the right. The main content area features a milestone card for 'Sprint 1', which is past due by 6 days and last updated less than a minute ago. The card includes a progress bar at 50% completion, with 1 open and 1 closed issue. Action links for 'Edit', 'Close', and 'Delete' are provided at the bottom of the card.

Kanban

Kanban is a visual system for managing work as it moves through a process. Kanban visualizes both the process (the workflow) and the actual work passing through that process.

Kanban, also spelt “kamban” in Japanese, translates to “Billboard” (“signboard” in Chinese) that indicates “available capacity (to work)”. Kanban is a concept related to lean and just-in-time (JIT) production, where it is used as a scheduling system that tells you what to produce, when to produce it, and how much to produce.

Divide User Stories Into Small Tasks

User Stories vs Tasks

www.mountangoatsoftware.com

The screenshot displays a Jira interface for a project named 'FabrizioFornari / SPM2020Template'. At the top, navigation tabs include 'Code', 'Issues 4', 'Pull requests', 'Actions', 'Projects 2', and 'Security'. The main view is titled 'Sprint #1' and shows a 'Sprint Backlog' with three user stories and two task panels.

Sprint Backlog:

- Driver Geolocalization** (points: 4, user story): #4 opened by FabrizioFornari. Reference: Sprint 1.
- User Story #1** (points: 3, user story): #1 opened by FabrizioFornari. Reference: 0 of 2.
- Driver Login** (points: 2, user story): #5 opened by FabrizioFornari. Reference: 1 of 3.

To do panels:

- Design Driver Database Table #5** (points: 2, user story): #5 opened by FabrizioFornari in FabrizioFornari/SPM2020Template. Reference: 1 of 3.
- Design a login page #5** (points: 2, user story): #5 opened by FabrizioFornari in FabrizioFornari/SPM2020Template. Reference: 1 of 3.

After several Sprints...

Group Management & Planning

Groups

<https://docs.google.com/spreadsheets/d/1tOdMoBKzBjcHGQI3ACmrkkcaFbc2TuPfgmFQM2jL9BU/edit?usp=sharing>

1. Define a Group, Choose a Project and “elect” a Scrum Master
2. Students that are not in a group will form a group based on the chosen project
3. Groups of 2 students may become groups of 3 students based on the chosen project

Meeting the customers

1. Possibility to discuss with different customers for different projects (around 15min each)
2. A customer will tell you about his/her own needs
3. You are supposed to take notes and ask questions to get some clarification
4. The notes that you take will help you in defining the user stories

NOTE: Customers are absolutely **NOT AUTHORISED** to give you additional information out of the lectures hours. So, do not bother them with questions, messages, mails or whatever comes to your mind.

Projects

Projects

IoT-Aware BPMN Platform

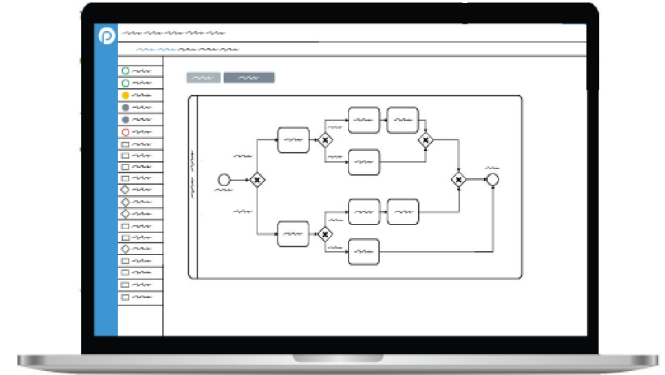

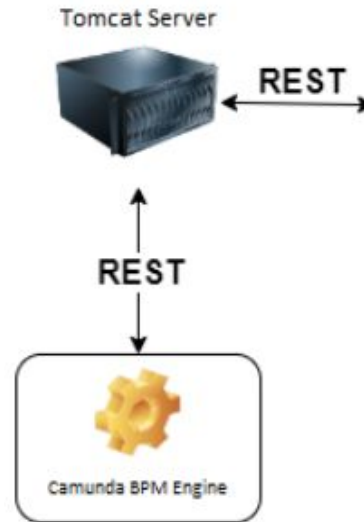

The project consists of implementing a **web application** that allows to **design and enact** IoT-Aware BPMN models

Model Design

The **bpmn-js** library, can be used to design models and should be extended to include IoT related informations

Model Execution

The models, after designed, can be sent to a **Camunda** BPMN engine for allow their execution

 **Process_072kiui**

Candidate Starter Configuration

Candidate Starter Groups

Specify more than one group as a comma separated list.

Candidate Starter Users

Properties Panel

IoT devices

The project is supported by real IoT devices that have to be configured using the **Property Panel** from the bpmn-js library

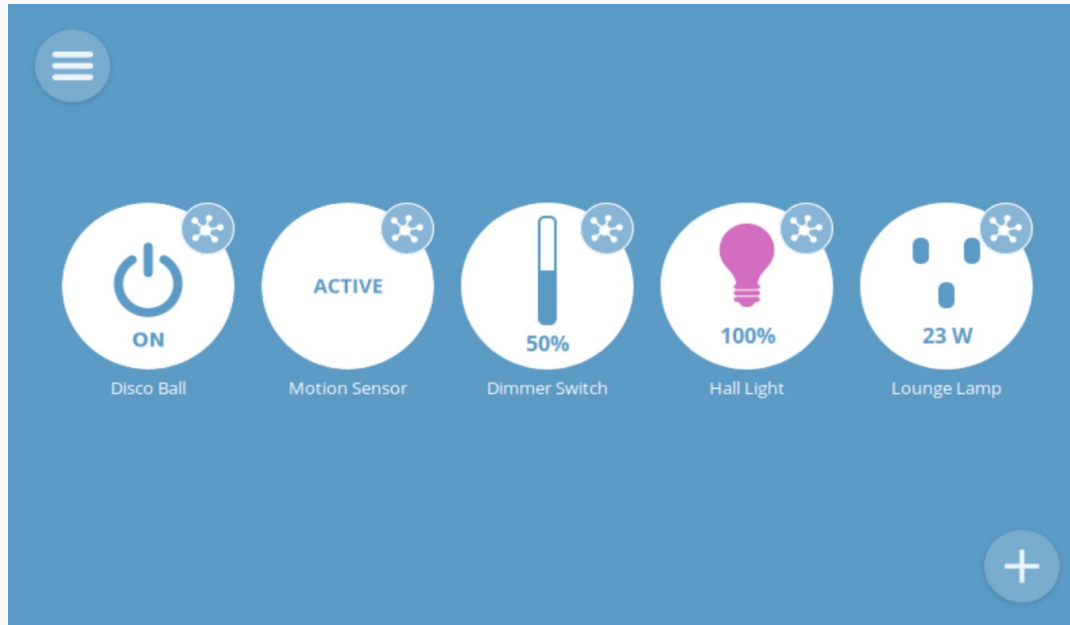

Projects

IoT Platform

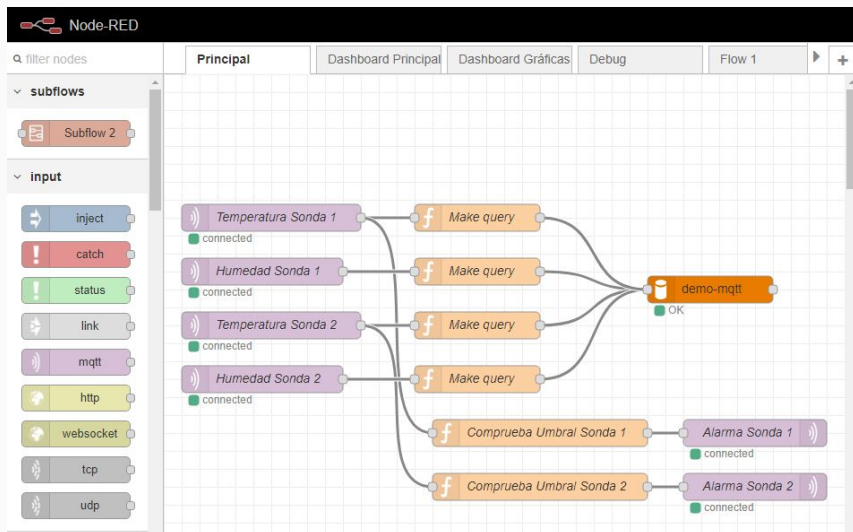

The project consists of realising an **IoT Platform** for managing **IoT devices**.

This platform must allow the **import**, **visualising** and **saving** of information related to IoT devices.

In order to provide backwards compatibility the IoT Platform should integrate the **Node-RED** tool.

Node-RED editor

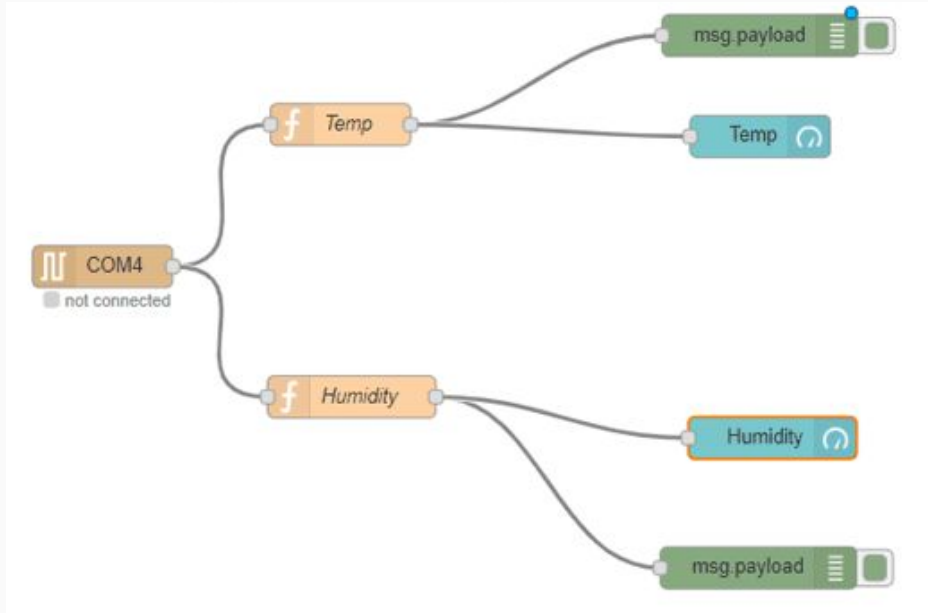

Node-RED dashboard

Requirements: What I need

1

Select a device inside the platform

2

Import the device information inside the Node-RED editor

3

Visualise the data inside the Node-RED dashboard

Summary: Requirements and Constraints

1

Devices information must be stored according to the [IoT-Lite ontology](#)

2

Devices information must be automatically imported inside the right **Node-RED node**

3

Node-RED dashboard must be used to visualise the IoT data

Questions?

Projects

Digital Library

The project consists in developing a web/mobile application for accessing digital books. The system allows users to create a digital library and to read stored books, add notes bookmarks and share them with other users. **MAX 2 groups**

The system should be able to integrate with a pre-existent one.
