

# ***Enterprise Architecture Modelling with ArchiMate 3 - Overview***

*Knut Hinkelmann*

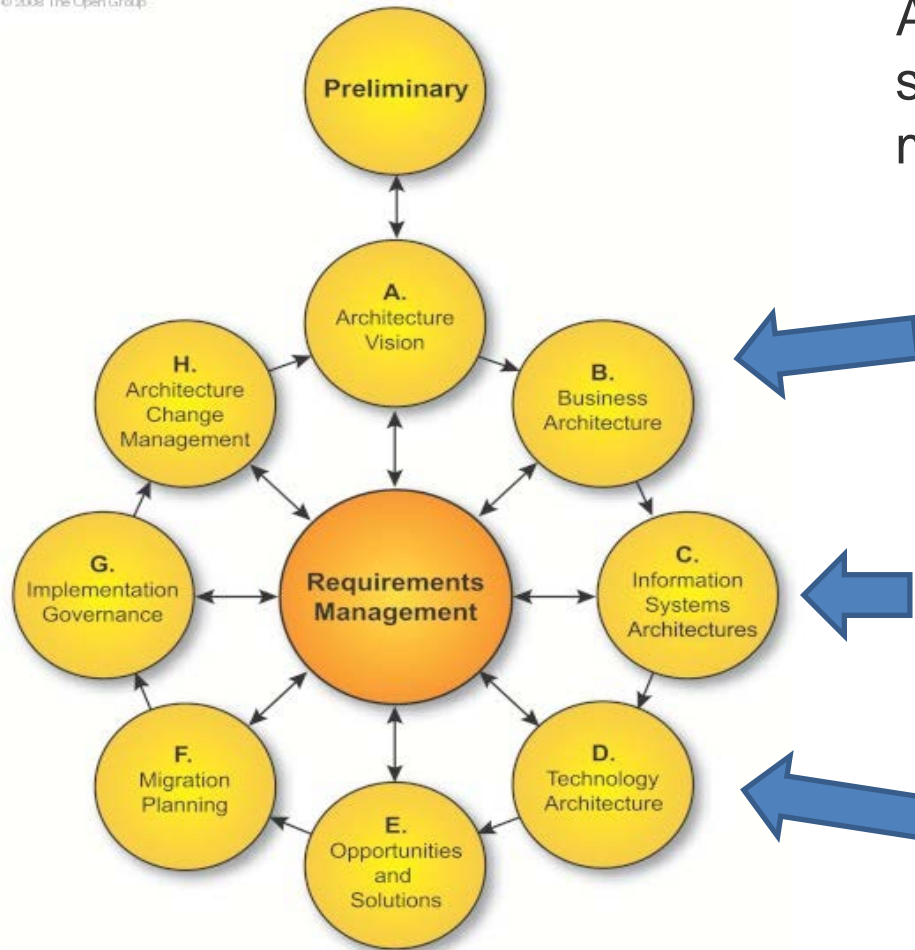

# Reference

- The ArchiMate 3 specification is available at <http://pubs.opengroup.org/architecture/archimate3-doc/>
- It is referenced in this presentation as ArchiMate 3

# TOGAF Architecture Views

© 2008 The Open Group

ArchiMate is a modeling language that supports the TOGAF content metamodel and the TOGAF ADM

**Business Architecture**

**Data Architecture**

**Application Architecture**

**Technology Architecture**

# Layers in ArchiMate

- ***Business Layer***
  - ◆ business services offered to customers, which are realized in the organization by business processes performed by business actors.
- ***Application Layer***
  - ◆ application services that support the business, and the applications that realize them.
- ***Technology Layer***
  - ◆ technology services such as processing, storage, and communication services needed to run the applications
  - ◆ computer and communication hardware and system software that realize those services.
  - ◆ Physical elements for modeling physical equipment, materials, and distribution networks (new in ArchiMate 3)

# Aspects in ArchiMate

## ■ *Active Structure*

- ◆ represents the structural elements (the business actors, application components, and devices that display actual behavior).

## ■ *Behavior*

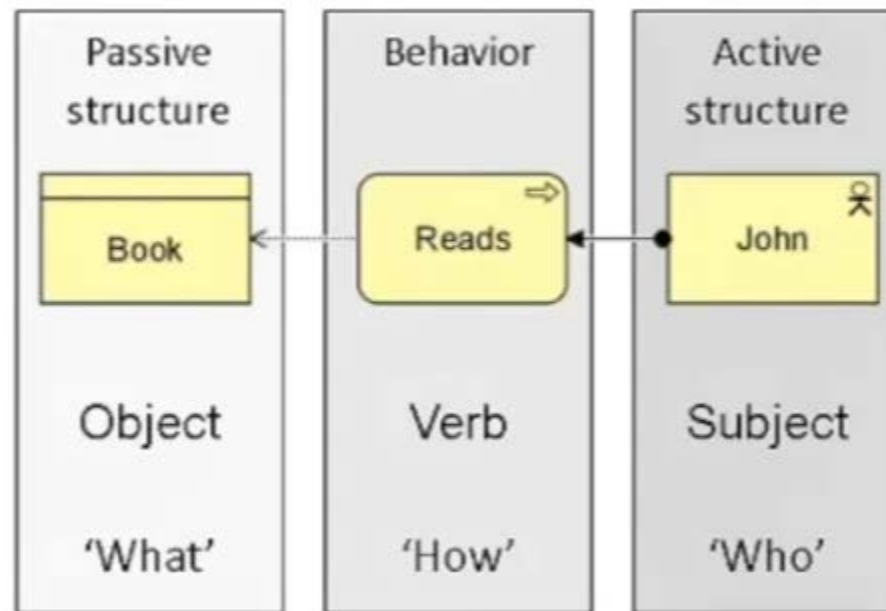

- ◆ represents the behavior (processes, functions, events, and services) performed by the actors.
- ◆ Structural elements are assigned to behavioral elements, to show who or what displays the behavior.

## ■ *Passive Structure*

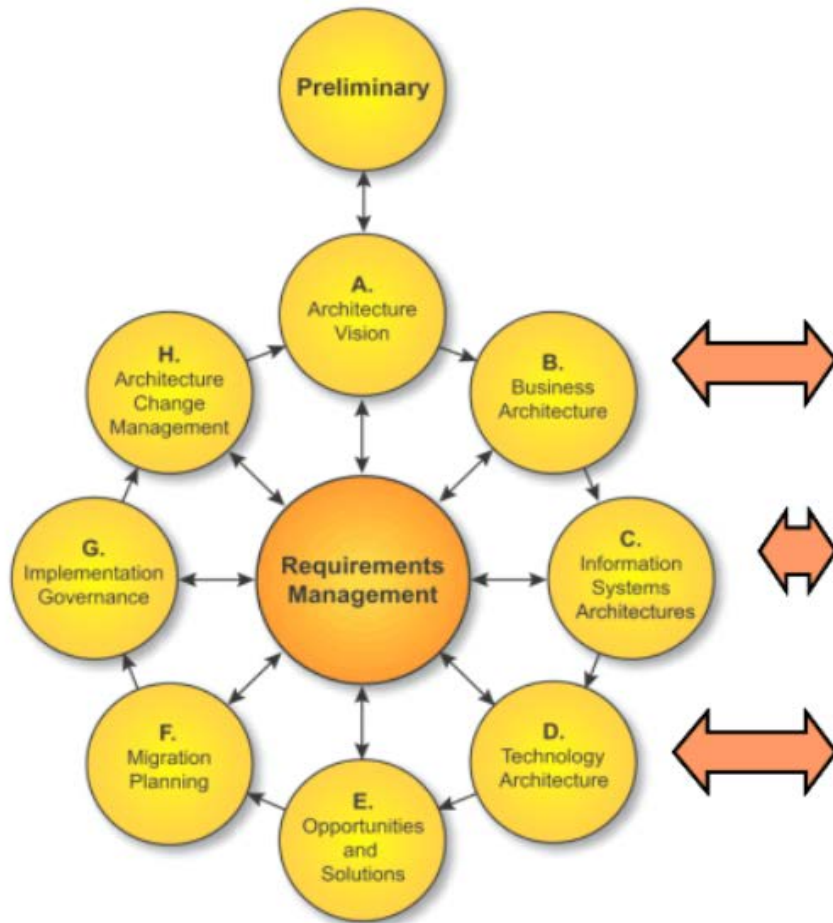

- ◆ represents the objects on which behavior is performed. These are usually information objects in the Business Layer and data objects in the Application Layer, but physical objects.

# Core Aspects in ArchiMate

- Aspects correspond to a Subject-Verb-Object of sentences:

# Abstractions in ArchiMate (1)

- Separate Behavior from active structure
  - ◆ **Behavior:** *what* the system must do and *how* the system does it
  - ◆ **Active structure:** the system constituents (people, applications, and infrastructure) that do it
  
- External vs. internal behavior :
  - ◆ **External view:** *what* the system has to do for its environment (e.g. a service)
  - ◆ **Internal view:** *how* it does this (e.g. the process or application realising the service)

# Abstractions in ArchiMate (2)

- Conceptual, logical, and physical abstraction levels
  - ◆ **conceptual elements** represent the information the business finds relevant;
  - ◆ **logical elements** provide logical structure to this information for manipulation by information systems;
  - ◆ **physical elements** describe the storage of this information; for example, in the form of files or database tables.
- In the ArchiMate language, this corresponds with business objects, data objects, and artifacts, and the realization relationships between them

# Hierarchy of Behavior and Structure Elements
